

Signature

GroupDocs Signature allows you to put together a package (an envelope) of documents that others can then sign electronically.

1

Choose a File

Signature

DROP FILES HERE

Select Signature from the menu on the dashboard. The Signature dashboard appears.

Drop the document you need signatures for in the DROP FILES HERE area.

If you get a dialog that asks **Do you want to update your names before you start?** you haven't entered a full name into your profile. It's not a problem, but we recommend that you enter them before sending documents for signing or your name will not appear in the interface.

Save

Next Step

Click **Add Me** to add yourself as a signatory

Click **Add Signer**

In the Recipient details dialog, enter the recipient's first and last names, an email address, and select a role.

3

Add Info

Document

Subject

Message

Enter an envelope name, a subject and a message.

4

Add Reminders

Next Step

Click **Next Step** to accept the default reminders.

5

Add Fields

Add Fields

Save

Next Step

Drag a signature field to the page.
Drag a date field next to the signature field.

6

Save and send

Send Now

The emails are sent.

Click **Send Now**

If your signatories don't have an account, they are asked to create one before logging in to sign the document. You are informed by email once a document is signed. The GroupDocs Signature dashboards shows the progress of your envelopes.

Congratulations! You've sent out a document to be signed.

Assembly

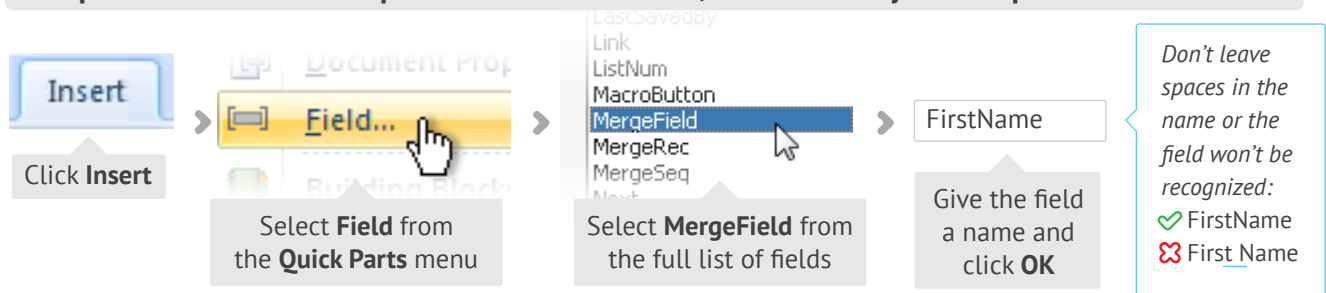

GroupDocs Assembly allows you to create questionnaires that help you create new documents quickly. A document assembly starts with a document with fields that collect the data. GroupDocs creates a questionnaire based on the document and this questionnaire can then be reused to save you time and effort.
